Question: Apples, mangoes, and papayas cost 3, 4, and 5 RM each. Spend exactly 50 RM and buy at least one of each. What is the maximum number of fruits?

Try 15 apples: 15 × 3 = 45 RM, leaving 50 − 45 = 5 RM. We can still buy 1 mango and 1 papaya with the remaining money. This plan is valid. [next token]

So 15 + 1 + 1 = 17 fruits. That's right, this plan spends exactly 50 RM and buys the most fruits. Answer: 17

So	**50.6%**
Now	21.1%
-	16.4%

But only 5 RM is left after 15 apples, while 1 mango and 1 papaya cost 4 + 5 = 9 RM, so both cannot be afforded.

But	**74.4%**
So	10.1%
Wait	7.8%

hand back to student

So 15 apples is not valid. Try 12 apples: 36 RM spent, and 1 mango plus 2 papayas cost 4 + 10 = 14 RM — 50 RM total for 12 + 1 + 2 = 15 fruits.
